

Mini Project 1-2

Use Case 1 (authorized)

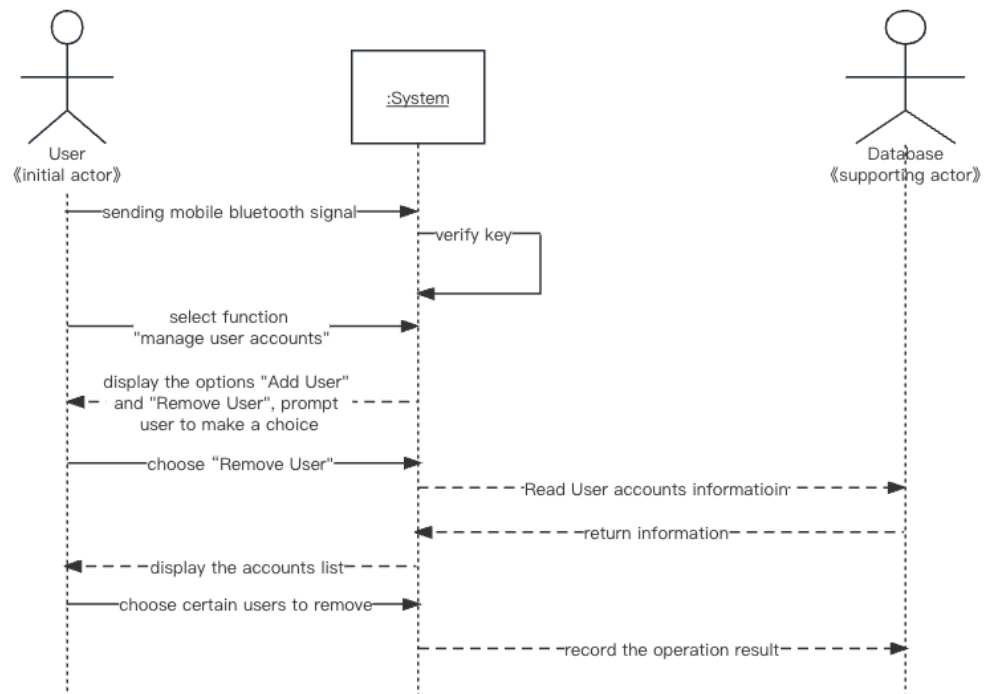

Use Case 1(not authorized)

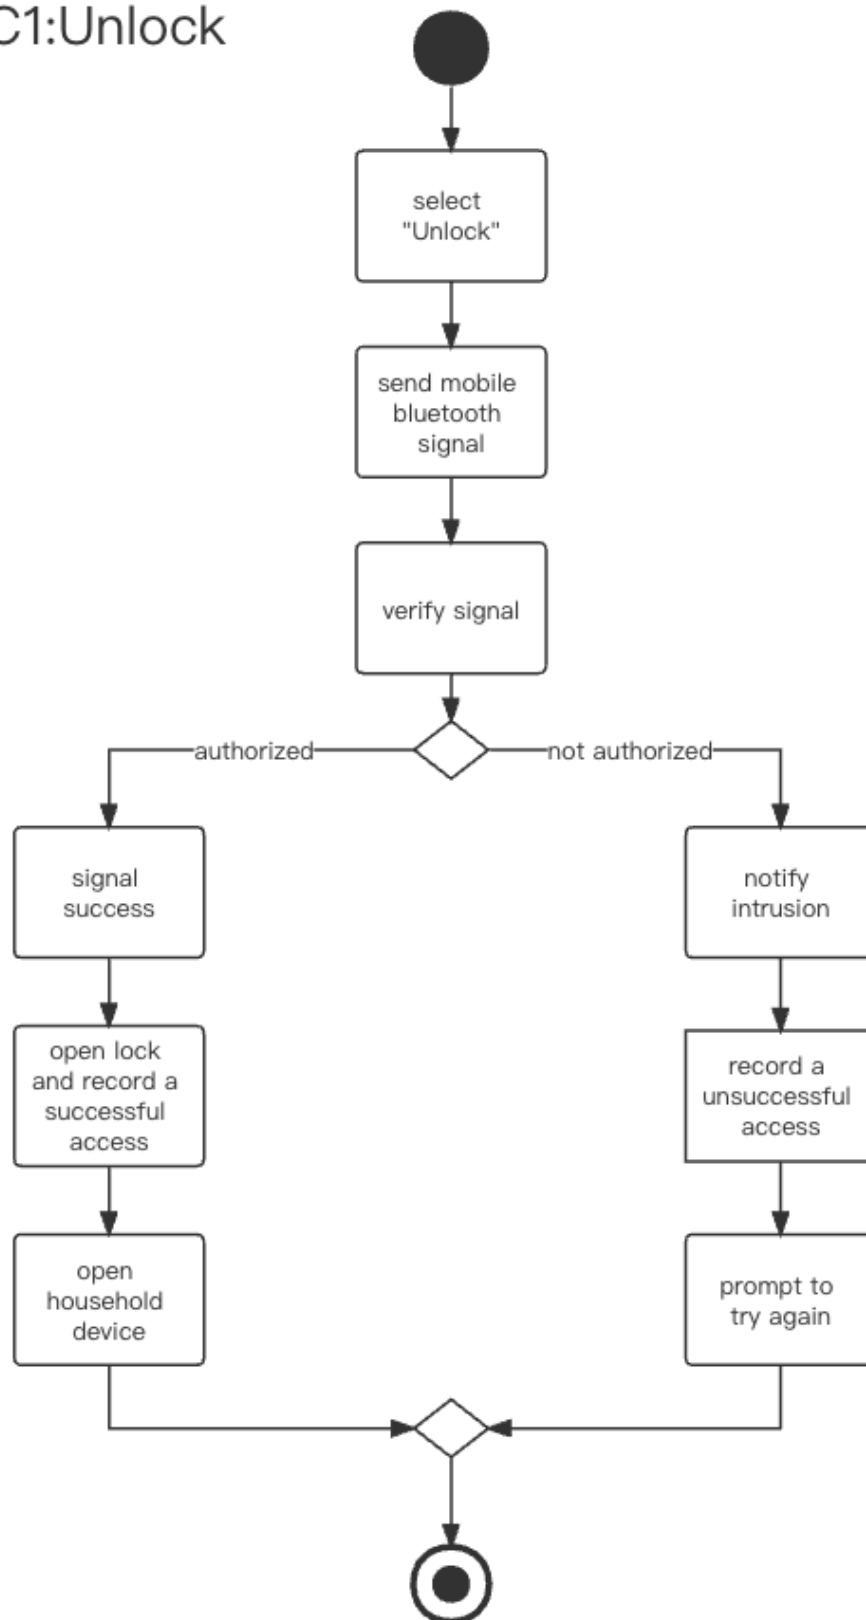

Use Case 4

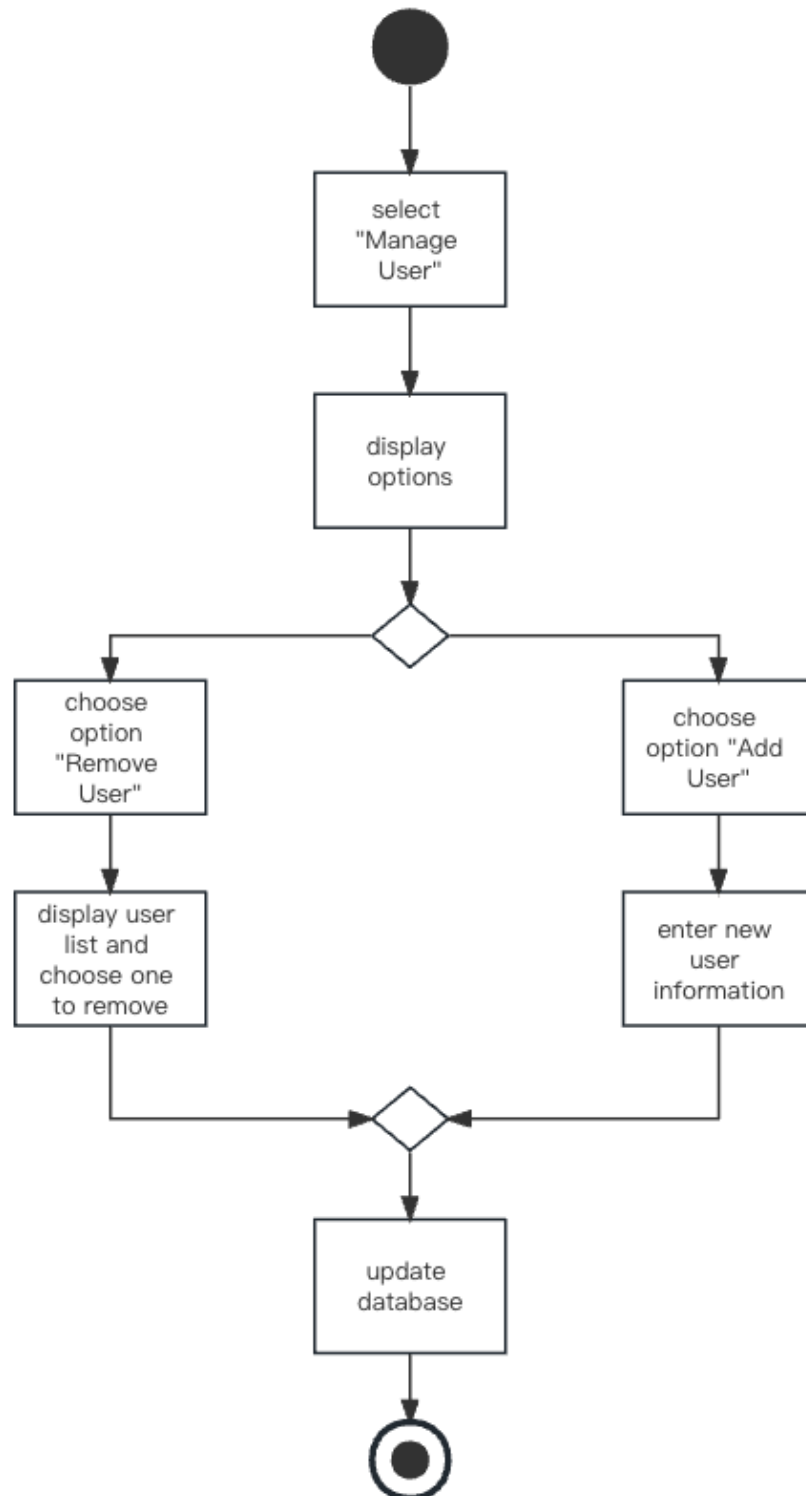

UC4:RetireUser

UC1:Unlock

UC4:RetireUser

Responsibility

Responsibility Description	Type	Concept Name
Rs1.Coordinate actions of concepts associated with this use case and delegate the work to other concepts.	D	Controller
Rs2. Form specifying the search parameters for database log retrieval.	K	Search Request
Rs3.Render the retrieved records into an HTML document for sending to actor's Web browser to display.	D	Page Maker
Rs4.HTML document that shows the actor the current context, what actions can be done, and outcomes of the previous actions.	K	Interface Page
Rs5.Prepare a database query that best matches the actor's search criteria and retrieve the records from the database.	D	Database Connection
Rs6.Archive the request in the database.	D	Archiver
Rs7.Notify Landlord the result.	D	Notifier

Association

Concept pair	Association description	Association name
Controller ↔ Page Maker	Controller passes requests to Page Maker and receives back pages prepared for displaying.	conveys requests
Page Maker ↔ Database Connection	Database Connection passes the retrieved data to Page Maker to render them for display.	provides data
Page Maker ↔ Interface Page	Page Maker prepares the Interface Page.	Prepares
Controller ↔ Database Connection	Controller passes search requests to Database Connection	conveys requests
Controller ↔ Archiver	The controller passes the user's operation to the Archiver.	conveys requests
Archiver ↔ Database Connection	Archiver requests Database Connection to store investigation requests into the	requests save

	database.	
Archiver ↔ Notifier	The Archiver requires the notifier to notify Landlord of the successful operation result.	requests notify
